Subject: Destroying our right to privacy and opportunities for small business/startups.
Date: Wednesday, 5 September 2018 4:02:06 PM

This bill will not only infringe on the spirit, if not the actual wording of Australian privacy law but also limit the development of new, Australian based startups that relate to online communication. Australia has a future as the brainy nation but with the limitations placed on our internet infrastructure along with now direct interference in how applications can operate. Will tarnish our technology sector to the international community and potentially make it too hard to start a business of this nature in Australia.
