

RIMPA Submission

We express regret for the delay in submitting this document and request the chance to contribute more meaningfully to this review as the leading industry association for records and information management. The review must prioritize the effective management of digital records by ensuring their proper retention or disposal, which is critical to reducing the risk of information being compromised by cyber threats. This would also increase public confidence that their personal information is less susceptible to unauthorized access. RIMPA's initial submission is brief, as we anticipate being invited to participate in a more comprehensive evaluation of this critical matter.

Please contact for further discussions.

Anne Cornish
